					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: The upper reaches of this clear water tributary were sampled for fish presence during a ADF&G Habitat & Restoration Division fish habitat survey of the Crescent River area. Stream was sampled from head waters in a muskeg area downstream to first location of first sampled fish at site 1-B-2. Stream above sample site 1-B-2 is small, shallow, and discontinuous in the upper end, therefore site 1-B-2 may be the upper extent of fish utilization. Coho rearing conditions at the site were good. A heavy alder cover and spruce overstory were present. The stream had a sand, gravel and mud bed with sloping banks and slow flows.

Revision 3/97

Appendix B4.-Aerial photo 4-3; sample sites 1-A-2 and 1-B-2.

Site 1-A-2 (mainstem and backwaters of Crescent River): rearing coho salmon, Dolly Varden, and sculpin documented. Pink salmon fry documented, spawning suspected. Coho salmon, Dolly Varden spawning suspected. Active eagle nest, recent brown bear and moose tracks.

Site 1-B-2 (tributary): coho salmon rearing.
